EDUCATION

Indian Institute of Technology, Varanasi

Varanasi, India

B.Tech (Dual Degree) in Mining Engineering [CPI: 8.55/10 (upto 7 semesters)]

Dec. 2021 - Present

Dr. KKR Gowtham International School

Andhra Pradesh, India

CBSE, Class X (Grade: 94.8%)

2019

Bihar Board, Class XII (Grade: 87.2%)

2021

EXPERIENCE

Full Stack Developer Intern — Undual analytics, Remote

nov 2024- present

- Built KYC verification system with serverless file uploads using AWS and Node.js, verified through the admin panel
- Integrated Razorpay for payment processing, resolved bugs including multiple sell transaction issues, and implemented feedback mechanisms with Toastify for critical actions, enhancing the overall user experience.
- Developed role-based access control for managing sub-admins and enhanced admin authentication. Integrated two-factor authentication (SMS API) and email notifications using Nodemailer; developing a ticketing system

Product Intern — Maiti labs, Remote

May. 2024-June, 2024

- Implemented Jira for task and bug tracking, improving issue resolution rates from 3-4 to 7-8 per sprint, and developed a five-stage workflow for better task management
- Established Confluence for documentation, enhancing team collaboration, and managed the hiring of a design intern to boost team capabilities.

PROJECTS

DDoS Stimulation

- Developed an educational DDoS simulation tool using HTTP flood techniques, with a client generating up to 5,000 requests and a proxy server spoofing IPs via the X-Forwarded-For header
- Implemented rate limiting on the target server to demonstrate mitigation techniques and the limitations of application-layer IP spoofing compared to network-layer spoofing.

Fest Pass

- Developed a QR code-based entry system for college fests with role-based access control for users, volunteers, and admins, ensuring secure and efficient entry management
- Integrated features like single-use QR code generation, email verification via OTP, admin controls, and volunteer QR code scanning

Geolocator-helper

- published a React hook library on npm (1000+ downloads) for geolocation and reverse geocoding using Olakrutrim
- Integrated external APIs for address retrieval with API key support or latitude/longitude access without one.

E commerce

- Built a responsive e-commerce app with a persistent cart using local storage, dynamic UI, and user feedback via React Toastify, supported by a Node.js backend.
- Implemented a robust payment system integrating Stripe for traditional payments and Coinbase Commerce API for crypto transactions, with webhook support to verify payment status.

TECHNICAL SKILLS

Languages:C/C++, Python, Rust, JavaScript, TypeScript

Frontend:React, HTML5, CSS3, Redux Toolkit, Next js TailWind Css, Bootstrap

Backend:Node, Express, MongoDB, REST APIs ,Pug, EJS , Cloudinary, Sql, Postgres, MySql,S3

Devops/Tools:Git, GitHub, Vercel, OnRender, Netlify, jira, confluence, Postman

Learning & Development:WebSockets, WebRTC, Multimedia Streaming (DASH, HLS)
